

IN THE CLAIMS

Please amend the claims as shown in the following listing of claims, which replaces all prior versions and listings of claims in the present application:

1 – 4. Cancelled.

5. (Previously presented) A support according to claim 12 wherein the diamond-like carbon material comprises a resistivity of from about 10^4 Ohm-cm to about 10^8 Ohm-cm.

6. (Previously presented) A support according to claim 12 wherein the diamond-like carbon material comprises from about 0.1 atom % to about 10 atom % of a metal additive, whereby the metal additive changes the resistivity of the coating.

7 - 11. Cancelled.

12. (Currently amended) A substrate support comprising:

(a) a ceramic structure having an electrode embedded therein, the electrode being chargeable to electrostatically hold a substrate; and

(b) a contact surface comprising a plurality of mesas, the mesas comprising a coating of a diamond-like carbon material directly over a ~~titanium-~~containing titanium metal adhesion layer, the diamond-like carbon material comprising a coefficient of friction of less than about 0.3 and a hardness of at least about 8 GPa, whereby the diamond-like coating reduces the abrasion and contamination of substrates that contact the coating.

13. Cancelled.

14. (Original) A support according to claim 12 wherein the coating comprises a thickness of from about 1 to about 20 microns.
15. (Currently amended) A support according to claim 14 wherein the titanium metal adhesion layer comprises a thickness of from about 0.25 to about 4 microns.
16. (Previously presented) A support according to claim 12 wherein the diamond-like carbon material comprises a diamond-like nanocomposite having networks of (i) carbon and hydrogen, and (ii) silicon and oxygen.
17. (Cancel).
18. (Previously presented) A support according to claim 12 wherein the diamond-like carbon material comprises a metal additive.
19. (Previously presented) A support according to claim 12 wherein the ceramic structure comprises AlN or Al₂O₃.
20. (Previously presented) A support according to claim 12 wherein the diamond-like carbon material is co-deposited with a metal additive by a process combining physical vapor deposition of the metal additive in a plasma enhanced chemical vapor deposition environment.
- 21-57. (Cancelled).

58. (Currently amended) A substrate support comprising:

(a) a ceramic support structure having an electrode embedded therein, the electrode being chargeable to electrostatically hold a substrate; and

(b) a contact surface comprising a plurality of mesas, ~~the mesas comprising each mesa substantially entirely composed of (i) a surface coating comprising a diamond-like carbon material having a carbon-hydrogen network, the surface coating comprising a coefficient of friction of less than about 0.3 and a hardness of at least about 8 GPa, whereby the coating is capable of reducing abrasion and contamination of a substrate that contacts the contact surface; and~~

(c) ~~a metal-containing (ii) an~~ an adhesion layer consisting of metal between the ceramic support structure and the surface coating of ~~the mesas~~.

59-60. Cancelled.

61. (Previously presented) A support according to claim 58 wherein the diamond-like carbon material comprises a diamond-like nanocomposite having networks of (i) carbon and hydrogen, and (ii) silicon and oxygen.

62. (Previously presented) A support according to claim 58 wherein the diamond-like carbon material comprises a resistivity of from about 10^4 Ohm·cm to about 10^8 Ohm·cm.

63. (Previously presented) A support according to claim 62 wherein the diamond-like carbon material comprises from about 0.1 atom % to about 10 atom % of a metal additive, whereby the metal additive changes the resistivity of the coating.

64 -85. Cancelled.
